Abstract.

There are many kinds of electronic digital currencies in the world now, such as Bitcoin, Ether, USDT, Litecoin, Dogecoin. Bitcoin is a decentralized and open-source payment system that operates without intermediaries or banks. The gold token coin (GTC) is a blockchain's electronic cash system which is based on one gram of gold. One GTC equals to one gram of gold. The GTC is different from other kinds of electronic cash.

1. Introduction

The gold token coin (GTC) is a blockchain's electronic cash system which is based on one gram of gold. One GTC equals to one gram of gold. It increments as small as 0.000000000000000001. The Ethereum decimal is 18. The gold token coin (GTC) is currently available as an ERC-20 token on the Ethereum blockchain. We will develop the new blockchain for the GTC in the future. The initial amount of the GTC coins is 48988000000. It equals to 48988 tons of gold, 48988000000 grams of gold.
